# IVANKA + YOU = ∞

IVANKA cares for its clients. We have ready-made solutions but just as well we can develop an entirely new one from a sketch. We offer 360 degree customer service: we will design, develop, prototype, manufacture, deliver and install whatever your dream in concrete. Owing both theoretical and practical expertise, these steps seamlessly bond together through the entire project cycle.

IVANKA is a design studio that offers flexibility and a factory with large capacity therefore capable to manufacture on a wide scale: from individual one-offs to serial production. We are loyal to our roots and even today caring hands give the final touch to every single concrete piece. This is IVANKA Human Made Smart Technology.

„It is not only architecture and design that establish the material but it is the material that the creative process, and the discipline of design demands a reciprocal relationship that can move from idea to materiality as well as in the opposite direction moving materiality to idea. We can experience the cumulative creative energy coming from the fusion of practices and an endless curiosity. We are developing each other’s third eye seeing the world another way.”

## CONCRETE SOUND – SERIES 2. CONCRETE LOUDSPEAKERS

Including the bass-reflex port the cabinet is entirely made of one single piece moulded concrete. Except for the removable bottom plate, there are no joints of panels. The strength, rigidity and high density of concrete are all wanted properties to efficiently isolate unwanted sound from the backside of dynamic loudspeakers.

DESIGNER: DÁVID JANKOVITS,  
ANDRAS RUDOLF IVANKA  
YEAR OF DESIGN: 2007
